

Davis Passive Radiation Shield for Temperature Sensor

Product Images

Short Description

Protects your Temperature Sensor from radiation & reflected heat.

Description

Protects temperature sensors from solar radiation and other sources of radiated and reflected heat.

This radiation shield is the most effective passive shield available. Multi-plate construction for maximum airflow.

Additional Information

Brand	Davis Instruments
Explanation	<p>A temperature probe placed in the direct sun, or where it is exposed to a radiant heat source such as a building or concrete will not provide accurate air temperature readings. This radiation shield is the most effective passive shield available. Multi-plate construction for maximum airflow. Assembly required. May be mounted on a metal pipe or wood surface.</p> <p>Use with Wireless Temperature Station or Leaf & Soil Moisture/Temperature Station and all temperature sensors used to measure air temperature.</p>
Installation	<p>Assembly required. May be used with Sensor Mounting Arm or mounted on metal pipe or wood surface.</p>
