# HOBO U20L-02 Water Level Data logger (0-30m)

#### **Product Images**

### **Short Description**

An accurate, low cost data logger designed to record water level fully compensated for barometric pressure in wells, streams, lakes etc.

#### **Description**

The HOBO U20L-02 is a low-cost, research-grade water level data logger for continuously measuring water level and temperature in a wide range of underwater environments. It features 0.1% measurement accuracy,

a polypropylene housing for use in both fresh and salt water, and a non-vented design for convenient and hassle-free deployment.

#### **Key Features**

- Ideal for use in both fresh and saltwater environments, including wells, streams, lakes, wetlands, and tidal areas
- For depths up to 30 metres (100 feet)
- Durable ceramic pressure sensor withstands freezing
- HOBOware Pro software provides easy conversion to accurate water level reading, fully compensated for barometric pressure, temperature, and water density in wells, streams, lakes etc
- The self-contained non-vented design eliminates installation/maintenance issues and errors associated with vent tubes, desiccant maintenance, water ingress etc.

Measures: Water Level, Temperature, Barometric Pressure

**IMPORTANT** Requires HOBOware Pro software and either a U-DTW-1 Waterproof Shuttle or the Base-U-4 Optic USB Base Station for configuration and data offload. Please see Connectivity Options below.
