# Spectrum Leaf Wetness Sensor

## Product Images

---

## Short Description

---

Measure leaf wetness with grid-like, resistance-based sensor for Spectrum stations.

## Description

---

Grid-like, resistance-type sensor mimics moisture on vegetation from 0 (dry) to 15 (wet). The sensor is a circuit board with interlacing gold-plated fingers. Condensation on the sensor lowers the resistance between the fingers, which is measured by a WatchDog Weather Station.

## Additional Information

---

Brand	Spectrum Technologies
Explanation	The sensor is a circuit board with interlacing gold-plated fingers. Condensation on the sensor lowers the resistance between the fingers, which is measured by a WatchDog Weather Station.
Ideal For	Agronomy
Installation	Jack connection into WatchDog logger or station.
Specification	Range / Resolution 0 (dry) to 15 (wet)
